

## **Additional Features**

- Responsive web design:
  - Considering the size of the screen arrangement of the elements changed.
  - Added burger menu when the screen is too small for navigations.
  - When the user is at the top of the page 'scroll down' sign and when the page is not at the top 'to the top' button appears. By clicking the button, the page moves to the top of the page.
- Main page:
  - Added more pictures and buttons for swiping the pictures.
- Profile page:
  - When the picture is clicked it is zoomed.
- Recipe page:
  - Changed element:active to onclick event.
- More about me page:
  - Added map so that people can see where the video was taken and see the distance between where the users are.
- Contact page:
  - Made each element as a button and once it is clicked the details are copied.

## **Evaluation**

- Since the initial web was not responsive it was hard to see when the size of the screen changed however by implementation it got easier to access.
- With the added elements content became more dynamic and convenient.

## How Responsive

- Responsive web design:
  - Considering the size of the screen arrangement of the elements changed.
  - When the user is at the top of the page 'scroll down' sign and when the page is not at the top 'to the top' button appears. By clicking the button, the page moves to the top of the page.

## How Tested

- Since the initial web was not responsive it was hard to see when the size of the screen changed however by implementation it got easier to access.
- With the added elements content became more dynamic and convenient.
